

RENALYTIX AI

RenalytixAI participating in Capital Markets Day for Kidney Health

November 19, 2019

Download [full announcement](#)

Renalytix AI plc (AIM: RENX), a developer of artificial intelligence-enabled clinical diagnostics for kidney disease, announces that it is participating in a London based event focused on Kidney Health that will bring together senior officials from leading health agencies, innovators in the area of kidney health and investors focused on Lifesciences and medical technology.

The event is being led by the American Society of Nephrology, supported by Stifel, N+1 Singer and the London Stock Exchange, and includes a key note address from Barbara Murphy, MD, Chair of the Department of Medicine and Dean for Clinical Integration and Population Health at the Icahn School of Medicine at Mount Sinai, New York.

The full agenda can be viewed here: http://www.rns-pdf.londonstockexchange.com/rns/8133T_1-2019-11-18.pdf

One of the greatest drivers of health care cost today is patients whose kidney disease is not diagnosed in time and face kidney failure and unplanned transition to dialysis. Each year kidney disease kills more people than breast and prostate cancer¹.

About Kidney Disease

Kidney disease is now recognised as a public health epidemic affecting over 850 million people globally. The Centers for Disease Control estimates there that 15% of United States adults or 37 million people currently have kidney disease. It is reported that 9 out of 10 adults with chronic kidney disease do not know they have it and 1 out of 2 people with very low kidney function who are not on dialysis do not know they have CKD⁴. Kidney disease is referred to as a “silent killer” because it often has no symptoms and can go undetected until a very advanced stage. Each year kidney disease kills more people than breast and prostate cancer. Every day 13 patients die in the United States while waiting for a kidney transplant.

About RenalytixAI

RenalytixAI is a developer of artificial intelligence-enabled clinical *in vitro* diagnostic solutions for kidney disease, one of the most common and costly chronic medical conditions globally. The Company's products are being designed to make significant improvements in kidney disease diagnosis, transplant management, clinical care, patient stratification for drug clinical trials, and drug target discovery.
