

RENALYTIX AI

Renalytix AI plc
("RenalytixAI" or the "Company")

Grant of Options

Renalytix AI plc (AIM: RENX), a developer of artificial intelligence-enabled clinical diagnostics for kidney disease, announces that the Remuneration Committee agreed to issue options over a total of 50,000 ordinary shares of £0.0025 each in the capital of the Company ("Share Options").

The Share Options have been issued in line with the Company's existing share option plan to Chirag Parikh, a Director of the Company. The Share Options have been issued in addition to the existing options over ordinary shares granted to Chirag Parikh on 1 November 2018, and combined the number of ordinary shares held under option by Chirag Parikh is 130,724, representing 0.22% of the existing issued ordinary share capital of the Company.

The Share Options are exercisable in 12 equal quarterly instalments over 36 months, in line with options previously granted to the Company's Directors under the Company's existing share option plan, and at an exercise price of £2.51.

About Kidney Disease

Kidney disease is now recognised as a public health epidemic affecting over 850 million people globally. The Centers for Disease Control estimates there that 15% of United States adults or 37 million people currently have kidney disease. It is reported that 9 out of 10 adults with chronic kidney disease do not know they have it and 1 out of 2 people with very low kidney function who are not on dialysis do not know they have CKD¹. Kidney disease is referred to as a "silent killer" because it often has no symptoms and can go undetected until a very advanced stage. Each year kidney disease kills more people than breast and prostate cancer. Every day 13 patients die in the United States while waiting for a kidney transplant.

About RenalytixAI

RenalytixAI is a developer of artificial intelligence-enabled clinical *in vitro* diagnostic solutions for kidney disease, one of the most common and costly chronic medical conditions globally. The Company's products are being designed to make significant improvements in kidney disease diagnosis, transplant management, clinical care, patient stratification for drug clinical trials, and drug target discovery.
